Contents

Optical turbulence of the atmosphere

by AZIZ ZIAD

1. Atmospheric turbulence: Dynamical turbulence & Optical turbulence
2. Wave propagation through atmospheric turbulence
3. Characterization of atmospheric turbulence
4. Optical atmospheric turbulence models
5. Statistical analysis of wavefronts for the estimation of coherence parameters
6. Instrumentation for measuring atmospheric turbulence
7. Impact of the atmospheric turbulence parameters on the high-angular resolution techniques
8. On-sky observations: measure of the parameters of turbulence with dedicated instruments and processing of the obtained data

Image formation through atmospheric turbulence & introduction to adaptive optics

by MARCEL CARBILLET

1. Introduction to high-angular resolution imaging
2. Numerical modeling of turbulence and image formation (speckles)
3. Numerical modeling of the optical detector noises
4. On-sky observations: short-exposure HAR images of multiple stars in the near infrared (if possible)
5. Data processing of the short-exposure data obtained on sky and from numerical simulations
6. Introduction to adaptive optics (AO)
7. AO error budget and post-AO point-spread function morphology
8. Numerical modeling and study of the anisoplanatic error
